Export Grain Analysis – in a timely manner without delays!

Kent Agri Lab Ltd is ready to start testing today.

Export Grain Testing — Authorized, Responsive and Ready Now

Kent Agri Lab Ltd. is a CFIA-authorized REGAL laboratory (Authorization No. 4001) accepting export grain samples today.

Important CFIA Change — April 1, 2027

Effective April 1, 2027, the Canadian Food Inspection Agency (CFIA) will no longer test grain samples eligible under the Recognition of Export Grain Analysis by Authorized Laboratories (REGAL) program.

Exporters must arrange REGAL-eligible testing through an authorized laboratory to support their applications for Phytosanitary Certificates.

REGAL Testing Services

- Live insect detection
- Soil detection
- Weed seed detection within REGAL scope

Testing is available for eligible grain shipments to international markets, subject to importing-country requirements.

CFIA retains sole authority to issue Phytosanitary Certificates. Testing outside REGAL scope remains with CFIA.

Our Commitment to Exporters

- **Prompt testing:** Initiated within one business day of sample receipt.
- **Timely reporting:** Reports released within one business day following completed analysis and required confirmations.
- **Efficient reporting:** Results formatted for import into your company's data systems.
- **Responsive service:** Direct access to our laboratory team.
